EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the

Authorization for this examiner's amendment was given in a telephone interview with Mr. Robert T. Pous (Reg. No. 29,099) on January 3, 2005.

The application has been amended as follows:

In the Abstract:

payment of the issue fee.

Line 3, after "collection", "means" has been changed to --device--.

Line 4, after "storage", "means" has been changed to --device--.

Line 6, after "storage", "means" has been changed to --device--.

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacques H Louis-Jacques whose telephone number is 703-305-9757. The examiner can normally be reached on M-Th 6:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Black can be reached on 703-305-8233. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The present application relates to an operating information control system of a construction machine. According to the claimed invention, there is provided means at the construction machine for collecting operating information regarding the construction, a first receiving device at a base station for receiving information from the construction and a storage means at the construction machine for storing operating information. The claimed invention also sets forth a detector means for detecting that the construction machine has left the base station and for detecting that the construction machine has returned to the base station and a transmission controller for transmitting operation information read from the storage m3ans to the first receiving means through a wireless radio having a limited range. According further to the claimed invention, the transmission controller further includes means responsive to a signal from the detector means that the construction machine has returned to the base station for transmitting the operating information read from the storage means to the first receiving device though the wireless radio. The prior art of record fails to disclose means responsive to a signal from the detector means that the construction has returned to the base station for transmitting the operating information read from the storage means to the first receiving means. The aforementioned limitations and combination thereof are taught in the prior art. In light of the foregoing, the claims of the present application are found to be patentable over the prior art of record.
